

# UI/UX Style Guide — Portfolio Site

EXTRACTED FROM SOURCE CODE · DESIGN REFERENCE FOR CONSISTENCY ACROSS PAGES & COMPONENTS

## 1. Color Palette

| TOKEN                                                                                                 | VALUE                    | USAGE                                                                   |
|-------------------------------------------------------------------------------------------------------|--------------------------|-------------------------------------------------------------------------|
|  <code>--bg</code>     | #f0f0f0                  | Page background (alternating sections)                                  |
|  <code>--white</code>  | #ffffff                  | Card backgrounds, alternate sections                                    |
|  <code>--navy</code>   | #190d26                  | Primary text, headings, dark panels                                     |
|  <code>--pink</code>   | #e8187a                  | Accent — links, icons, active states                                    |
|  <code>--pink2</code>  | #f9004d                  | Gradient endpoint                                                       |
| —                                                                                                     | <code>--pink-grad</code> | 135deg gradient, pink → pink2 — CTAs, badges, skill bars, timeline dots |
|  <code>--muted</code>  | #7a7a8c                  | Secondary / body text                                                   |
|  <code>--border</code> | #e0e0e0                  | Card borders, dividers, input borders                                   |

### Shadows:

```
--shadow:    0 4px 24px rgba(25,13,38,0.10);  /* resting elevation */
--shadow-lg: 0 8px 48px rgba(25,13,38,0.15);  /* hover / floating elements */
```

**Contrast pairing:** dark navy panels (contact info block) vs. white panels break up an otherwise light-heavy layout. A soft translucent pink circle bleeds off the corner of dark panels as a decorative accent.

## 2. Typography

**Font family:** 'Poppins', sans-serif (weights 300–900), Google Fonts. Single typeface throughout — no serif pairing.

| ELEMENT            | SIZE                         | WEIGHT  | NOTES                                   |
|--------------------|------------------------------|---------|-----------------------------------------|
| Hero heading (h1)  | clamp(2.4rem, 4.5vw, 3.8rem) | 800     | Pink span for name/highlight            |
| Hero subheading    | clamp(1.6rem, 3vw, 2.6rem)   | 800     | Full pink color                         |
| Hero bio           | .88rem                       | 400     | Muted, line-height 1.8, max-width 460px |
| Section title (h2) | clamp(1.8rem, 3vw, 2.5rem)   | 800     | Navy + pink accent word                 |
| Section subtitle   | .85rem                       | 400     | Muted, line-height 1.75                 |
| Eyebrow / label    | .62–.7rem                    | 600     | Uppercase, letter-spacing .18–.2em      |
| Nav links          | .75rem                       | 500     | Uppercase, letter-spacing .06em         |
| Body / description | .75–.85rem                   | 400–500 | Muted color                             |
| Card titles        | .92–.95rem                   | 700     | Navy                                    |

**Voice pattern:** small labels are consistently uppercase with wide letter-spacing (.06em–.2em) at 60–75% base size — the site's signature "technical/data" typographic texture, distinct from the larger display type.

## 3. Layout & Structure

- **Sticky top nav** — 70px height, white background, subtle shadow; logo / links / CTA button layout.
- **Alternating section backgrounds** — toggles between `--bg` and `--white` for rhythm without hard dividers.
- **Standard section anatomy:** eyebrow (pink, uppercase) → title (navy + pink accent word) → subtitle (muted, constrained width) → content grid.
- **Grid system:** CSS Grid with auto-fit/auto-fill + minmax() — responsive without extra breakpoints:
  - Services: `repeat(auto-fit, minmax(240px, 1fr))`
  - Portfolio: `repeat(auto-fill, minmax(290px, 1fr))`
  - Skills: `repeat(auto-fit, minmax(260px, 1fr))`
- **Two-column splits** (resume, contact) collapse to one column under 960px.

## 4. Signature Components

### Hero

Split layout — text block left, organic photo frame right. Photo container uses an asymmetric arch shape ( `border-radius: 50% 50% 0 0 / 60% 60% 0 0` ). Floating identity card overlaps the photo. Vertical scroll-cue top-right. Content fades in sequentially via staggered `animation-delay` (0.1s → 0.6s).

### Cards (services & portfolio)

White background, 1.5px border, 16px radius. **Hover:** border → pink, lifts (translateY -5px to -6px), shadow deepens to a pink-tinted glow. Icon badges: 50×50px rounded squares with pink line-art SVG icons.

### Filter pills (portfolio)

25px border-radius, transparent by default; active/hover fills with the pink gradient, text turns white.

### Tabs (resume)

Underline style — 2px bottom border, transparent by default. Active: pink text + pink bottom border.

### Timeline (experience/education)

Vertical gradient line with pink dot markers (white ring halo). Pink pill-shaped date badges. Dashed separators between items.

### Skill bars

Track: #e8e8e8, 6px height. Fill: pink gradient, animates 0%→target% over 1.3s, triggered by IntersectionObserver on scroll.

### Contact section

Dark navy info panel (decorative pink circle bleed) + white form panel. Inputs: bg fill, border turns pink on focus. Submit button: full-width pink gradient, uppercase bold, hover lift + glow.

### Footer

Navy background, muted white text, flex space-between; stacks/centers on mobile.

## 5. Motion & Interaction

| INTERACTION               | BEHAVIOR                                                                                 |
|---------------------------|------------------------------------------------------------------------------------------|
| Scroll-triggered entrance | Fade+slide up (opacity 0→1, translateY 24px→0) via IntersectionObserver, staggered ~60ms |
| Hero load-in              | Sequential fade-up via CSS animation-delay (no JS)                                       |
| Card hover                | Lift + border color shift + shadow deepen, ~0.2-0.3s ease                                |
| Button hover              | Slight lift + opacity dip + glow shadow                                                  |
| Skill bars                | Width transition 1.3s cubic-bezier(.4,0,.2,1), fired on scroll-into-view                 |
| Nav active state          | Auto-updates on scroll based on section position                                         |
| Tab/filter switching      | Instant class toggle — deliberately snappy, no transition                                |

**General easing:** short durations (0.2-0.3s) for micro-interactions, longer (0.6-1.3s) for entrance/reveal animations. No bounce/elastic easing — smooth and professional throughout.

## 6. Voice & Branding

UI copy leans into a **data-analyst persona** as a running motif, not just visual styling:

- Submit button: *"EXECUTE QUERY →"*
- Form placeholder: *"Select \* From Opportunities"*
- Footer: `console.log("Hire me!")`
- Section eyebrow: *"p < 0.05 (I'm statistically significant)"*
- Browser title reference: *The Data said, "...;...!"*

This copy voice should be preserved/extended in any new content — it's as much a part of the identity as the color palette. **Logo:** custom bar-chart SVG mark (three ascending bars), not a photo or initials.

## 7. Responsive Breakpoints

| BREAKPOINT | CHANGES                                                                                            |
|------------|----------------------------------------------------------------------------------------------------|
| ≤ 960px    | Nav links hidden; hero stacks & centers; two-column grids → single column; footer stacks & centers |
| ≤ 600px    | Services grid → 1 column; portfolio grid → 1 column                                                |

No component uses fixed pixel widths for grids — responsiveness is handled primarily through auto-fit/auto-fill + minmax(), with breakpoints reserved for layout direction changes rather than column-count tuning.

## 8. Quick Reference — CSS Variables

```
:root {
  --bg: #f0f0f0;
  --white: #ffffff;
  --navy: #190d26;
  --pink: #e8187a;
  --pink2: #f9004d;
  --pink-grad: linear-gradient(135deg, #e8187a, #f9004d);
  --muted: #7a7a8c;
  --border: #e0e0e0;
  --text: #190d26;
  --font: 'Poppins', sans-serif;
  --shadow: 0 4px 24px rgba(25,13,38,0.10);
  --shadow-lg: 0 8px 48px rgba(25,13,38,0.15);
}
```
